

💡 think like a developer #1

Introduction

What is this course?

What is this course?

Consider it an introductory course to *programming concepts*.

What to expect

At the end of the course you should:

What to expect

At the end of the course you should:

- be comfortable using a programming language

What to expect

At the end of the course you should:

- be comfortable using a programming language
- be familiar with the command line

What to expect

At the end of the course you should:

- be comfortable using a programming language
- be familiar with the command line
- know how to document, test, and debug simple programs

What to expect

At the end of the course you should:

- be comfortable using a programming language
- be familiar with the command line
- know how to document, test, and debug simple programs
- know some basic data structures and algorithms

What to expect

At the end of the course you should:

- be comfortable using a programming language
- be familiar with the command line
- know how to document, test, and debug simple programs
- know some basic data structures and algorithms
- and more!

What not to expect

What not to expect

- You won't be an "expert" programmer (I'm not myself!)

What not to expect

- You won't be an "expert" programmer (I'm not myself!)
- We're not going to build an app or website

Motivation

Motivation

- I want you to be confident writing programs and breaking down complex problems.

Motivation

- I want you to be confident writing programs and breaking down complex problems.
- It's an opportunity for me and you to relearn the basics together.

Motivation

- I want you to be confident writing programs and breaking down complex problems.
- It's an opportunity for me and you to relearn the basics together.
- I love to teach 😊.

We'll use JavaScript

Why?

Why?

- It's a ubiquitous language; it's the "language" used in browsers, it's also used to build desktop and mobile apps, backends, command line programs, and developer tools!

Why?

- It's a ubiquitous language; it's the "language" used in browsers, it's also used to build desktop and mobile apps, backends, command line programs, and developer tools!
- It is, for the 9th year, the most popular language ([Source](#))

Why?

- It's a ubiquitous language; it's the "language" used in browsers, it's also used to build desktop and mobile apps, backends, command line programs, and developer tools!
- It is, for the 9th year, the most popular language ([Source](#))
- It's an interpreted, dynamic language (for now, this means it's easy to get started with it)

Why?

- It's a ubiquitous language; it's the "language" used in browsers, it's also used to build desktop and mobile apps, backends, command line programs, and developer tools!
- It is, for the 9th year, the most popular language ([Source](#))
- It's an interpreted, dynamic language (for now, this means it's easy to get started with it)
- It's the language I'm most accustomed to 😊

What we'll cover

What we'll cover

- Values and types 
- Making decisions 
- Using functions 
- Testing 
- Developer tools 
- Source control 
- Repetition 
- Files and input/output 
- Modules 
- Data structures 
- Exceptions 
- JavaScript quirks 

(This may change)

Software we'll use

Software we'll use

- Node.js v14+

Software we'll use

- Node.js v14+
- Visual Studio Code

Software we'll use

- Node.js v14+
- Visual Studio Code
- A terminal

Course format

Course format

- Zoom meetings on Saturdays and Sundays from 12 to 12:45pm

Course format

- Zoom meetings on Saturdays and Sundays from 12 to 12:45pm
- First 30 minutes for teaching, remaining for questions

Course format

- Zoom meetings on Saturdays and Sundays from 12 to 12:45pm
- First 30 minutes for teaching, remaining for questions
- Check course website thinkdev.netlify.app for slides, recordings, exercises, etc.

Demo: editor tour

Exercise

1. Install the necessary software.
2. Customise VS Code (optional).
3. Write a JavaScript program to show your name.
4. Make sure it works and all is clear 😊.

Questions?
